

## Protect Medicaid Funding

### *Children's Health*

#### Issue # 1

Medicaid provides a long-term investment in health that helps people succeed. It increases the diagnosis and early treatment of chronic conditions, enhances educational achievement and future earnings for covered children, and reduces health care disparities.<sup>1</sup> Medicaid coverage is tailored to the unique needs of low-income individuals and families, but still costs less per enrollee than employer-based insurance.<sup>2</sup> Despite Medicaid's proven success and efficient use of funds, opponents repeatedly seek to cut or cap funding for the program. These proposals seriously jeopardize the health and financial security of the 97 million people who benefit from Medicaid each year.<sup>3</sup> Medicaid's core consumer protections make the program work for enrolled populations, including children, parents, pregnant women, low-income workers, older adults, and people with disabilities. This fact sheet explains why Medicaid is so critical for children and examines how they would be harmed by Medicaid funding caps.

#### ***Why Medicaid is important for children:***

- **Medicaid covers health services for nearly 37 million children living in or near poverty (1 in every 4 children).** Federal law requires state Medicaid programs to provide coverage for all children in families with incomes up to 138% of the Federal Poverty Level (about \$33,600 a year for a family of four).<sup>4</sup> Medicaid also serves as the health care lifeline for abused and neglected children placed in state foster care systems, as well as for many children living with developmental and other disabilities.
- **Medicaid provides children with comprehensive preventive health screenings and treatment to address health issues early on.** Federal law requires state Medicaid programs to offer Early and Periodic Screening, Diagnostic and Treatment benefits to Medicaid-enrolled children under age 21.<sup>5</sup> Commonly referred to as "EPSDT," these services are designed to foster strong childhood development despite the many complications of living in poverty. The purpose of EPSDT is to ensure that children do not needlessly suffer from preventable and treatable health conditions, so they can grow up to be healthy and productive adults.<sup>6</sup>
- **Medicaid pays for services for highly vulnerable children with chronic conditions and complex health needs.** Medicaid programs are required to treat physical and mental illnesses and conditions that are detected in Medicaid-enrolled children.<sup>7</sup> Covered

services include home care that enables children who are medically fragile to live at home rather than in institutional settings, visits to pediatric specialists for children with chronic conditions, and evidence-based treatments for children with diagnosed conditions, such as intensive behavioral therapies for children with Autism Spectrum Disorders (ASD).

- **Medicaid helps ensure children have real access to health care.** Medicaid generally prohibits all forms of cost sharing for children, a critical protection for children in low-income families. Medicaid provider networks must include pediatric primary care providers and specialists. Recognizing the challenges faced by low-income families, Medicaid programs must also offer assistance in scheduling children's doctor visits as well as transportation services to get children to and from health providers.<sup>8</sup> Finally, to prevent coverage delays and guarantee continuity, infants born to mothers receiving Medicaid are automatically enrolled in Medicaid and remain eligible for a full year, unless family income increases sharply.<sup>9</sup>

#### ***How funding caps would harm children:***

- **Funding caps would likely lead to cuts in services for children living in poverty.** Block grants and per capita cap proposals reduce the amount of federal funding available to states to help provide essential health care services for vulnerable, needy children. With less money to take care of the same children, states would likely cut back children's health care services.
- **Funding caps threaten core protections for children.** With less federal funding available, states would likely pursue reversals or exceptions to long-standing federal standards for children. For example, states might increase efforts to undermine EPSDT or the prohibition on cost sharing generally applicable to all children. States might also try to reverse the ACA requirement extending Medicaid eligibility to children ages 6 to 18 living just above the poverty level.
- **States would likely limit access to health care for children.** Federal spending caps would lead states to adopt cost-savings measures that reduce access to children's health care, such as narrowing provider networks to exclude pediatric specialists and adding more hurdles for children to access services, such as prior authorization requirements. States would be most likely to place barriers on expensive specialty care for children with complex health needs, restricting access to care for the children who need it most.

<sup>9</sup> 42 U.S.C. § 1396a(e)(4); 42 C.F.R. § 435.117. Children born to mothers receiving Medicaid on their date of birth are automatically deemed eligible and enrolled in Medicaid as of that date, meaning there is no administrative obligation for families or delay in starting a newborn's coverage. Such children automatically remain eligible for Medicaid for a full year as long as the mother's income does not exceed the Medicaid pregnancy limit (which may be higher than normal limits).
